

## Recombinant Human Galectin-1 (rHuGalectin-1)

## PrimeGene Technical Data Sheet

Catalog Number: 603-01

Source: Escherichia coli.

Molecular Weight: Approximately 14.6 kDa, a single non-glycosylated polypeptide chain containing 134 amino acids.

Quantity:  $10 \mu g / 100 \mu g / 500 \mu g$ 

**AA Sequence:** ACGLVASNLN LKPGECLRVR GEVAPDAKSF VLNLGKDSNN LCLHFNPRFN

AHGDANTIVC NSKDGGAWGT EQREAVFPFQ PGSVAEVCIT FDQANLTVKL

PDGYEFKFPN RLNLEAINYM AADGDFKIKC VAFD

**Purity:** > 95 % by SDS-PAGE and HPLC analyses.

Fully biologically active when compared to standard. The biological activity determined by a **Biological Activity:** 

chemotaxis bioassay using human blood monocytes is in a concentration range of 1.0-10 ng/ml.

**Physical Appearance:** Sterile Filtered White lyophilized (freeze-dried) powder.

Formulation: Lyophilized from a 0.2 μm filtered solution in PBS pH 7.0, 3mM β-Me, 5% Trehalose, 0.02% Tween

20.

**Endotoxin:** Less than 0.1 EU/µg of rHuGalectin-1 as determined by LAL method.

**Reconstitution:** We recommend that this vial be briefly centrifuged prior to opening to bring the contents to the

> bottom. Reconstitute in sterile distilled water or aqueous buffer containing 0.1 % BSA to a concentration of 0.1-1.0 mg/mL. Stock solutions should be apportioned into working aliquots and

stored at  $\leq$  -20 °C. Further dilutions should be made in appropriate buffered solutions.

Shipping: The product is shipped at ambient temperature. Upon receipt, store it immediately at the temperature

recommended below.

**Stability & Storage:** Use a manual defrost freezer and avoid repeated freeze-thaw cycles.

12 months from date of receipt, -20 to -70 °C as supplied.

1 month, 2 to 8 °C under sterile conditions after reconstitution.

3 months, -20 to -70 °C under sterile conditions after reconstitution.

This material is offered by Shanghai PrimeGene Bio-Tech for research, laboratory or further Usage:

evaluation purposes. NOT FOR HUMAN USE.

## Human Galectin-1

Human Galectin-1 also named BHL, Galaptin, GBP, L-14 and LGALS1, is belonging to the galectins family and it is encoded by the LGALS1 gene in human. Galectin-1 is expressed by the endometrial stromal cells throughout the menstrual cycle. Galectin-1 contains a single carbohydrate recognition domain through which it can bind glycans both as a monomer and as a homodimer. Dimers are non-covenantly bound and will spontaneously disassociate in low concentration. Galectin-1 may act as an autocrine negative growth factor that regulates cell proliferation. Galectin-1 is thought to play a role in the immunosuppression required for a successful pregnancy. Human Galectin-1 shares 88 %-90 % amino acid sequence identity with rat and mouse.
